

BRONZE PATINAS

Products utilizes the finest art grade bronze alloys in the production of our hardware. Our Dark Bronze, Light Bronze and Matte Black products are produced from silicon bronze, a coppery-gold colored alloy of copper, silicon and zinc.

Our **Dark Bronze** patina is our most popular, and allows for the greatest uniformity in shade at time of delivery. We aim to stock the most popular items in this patina.

Natural Bronze patina allows for a trendy look similar to a lightly aged-brass. The modern color tone, coupled with the natural distressing typical of sand-cast bronze hardware results in a distinct product to suit multiple design styles. **All Natural Bronze orders are custom manufactured and as such nonreturnable.**

Our **Matte Black** products are created through the application of a black powder coat, emanating a look from Tudor architecture around Stratford-upon-Avon in England. Note that this finish is susceptible to chipping as a result from knocks or scratches from objects such as keys or rings. The finish may be restored in the ageold way: by applying a fresh coat of black paint to the affected area. **All Matte Black orders are custom manufactured and as such nonreturnable.**

Our **White Bronze** products are produced from an alloy known simply as white bronze. The infusion of manganese and nickel to the copper creates a pleasing silver colored metal.

Our **White Medium** patina products are hand finished in small batches. Each batch will be similar in hue, however different batches may have slight variation in tone. Such differences are caused not only by the small variation in time for which the item is oxidized, but also environmental factors such as humidity and temperature. **All White Medium orders are custom manufactured and as such non-returnable.**

An application of light coating of wax to protect products from oxidization and wear. As the wax coating wears off, the patinas will be exposed to the environment. The effects of age, climate and touch will work in conjunction to create unique, contrasted color variations. The most frequently touched areas will highlight as the patina wears off and natural shades of bronze are exposed. Areas which are not handled may oxidize further, and the combination of colors and hues will accentuate the timeless elegance of bronze.
